ACADEMIC RESEARCH & PROJECTS

Action Reasoning via State Changes in Videos

June. 2022 - May 2023

Advisor: Dr. Oriana Riva and Dr. Jianwei Yang

- Proposed a new task to predict actions and state changing objects from start state and end state frames in videos. Also, proposed counterfactual probe tasks to test action reasoning.
- Proposed a transformer based slot attention model to detect state changing object and predict action.

Visual Commonsense Reasoning

Jan. - June 2019

Advisor: Prof. David Kriegman

- Task: Answer a question, given an image, and also provide a rationale.
- Proposed novel end to end joint learning of answer and rationale prediction by using softmax, gumbel-softmax and reinforcement learning approaches to tackle non-differentiability.
- Implemented in PyTorch; used Docker and Kubernetes cluster for running multi-GPU tasks.

Generative Adversarial Network (GANs) Inspection

Apr. - June 2019

- Inspected latent manifold learned by DCGAN and PgGAN through various interpolation, extrapolation and vector arithmetics techniques.
- Proved that semantic relations are learned in the manifold.

Optical Character Recognition using Deep Learning

Feb. - June 2018

Advisor: Dr. Mohsen Malmir

- Researched various CNN models - U-Net, DeepLab v3+ - to segment text from images and PDFs.
- Used novel multi-task learning approach to instance segment, recognize and detect words.
- Achieved a recall of 97.8% on train set and 95% recall on test set.

Knowledge Distillation for Semantic Segmentation

July - Aug. 2018

Advisor: Dr. Mohsen Malmir

- Compressed U-Net into a much smaller model without decline in accuracy.
- Reduced model parameters by 84%, improved speed by 20% and reduced memory usage by 21%.
